

CLAIMS

005732-000033.CB.280512

- 5 1. A microwave cooking device comprising:
 at least one first container defining at least one first volume for
 holding a food product, the container including at least one venting
 mechanism; and
 a second container operatively coupled to the at least one first container,
10 wherein the second container defines a second volume, the second container
 including at least one venting mechanism;
 wherein steam created by the cooking of the food product in the at least one
 first container creates a first pressure treatment for the food product before venting
 into the second volume defined by the second container, wherein the second
15 volume creates a second pressure treatment for the food product as a result of
 steam venting from the first container into the second container.
2. The device of claim 1, wherein the at least one first container is a first
 receptacle.
20
3. The device of claim 2, wherein the second container is a second receptacle.
4. The device of claim 2, the first receptacle further including a peripheral edge.
- 25 5. The device of claim 4, wherein the at least one first volume is defined by
 sealing a cover to the peripheral edge of the first receptacle.
6. The device of claim 2, wherein the second container encloses the first
 receptacle.
30
7. The device of claim 3, wherein the second receptacle encloses the first
 container.

8. The device of claim 1, wherein the at least one first container is a cup having an opening.
- 5 9. The device of claim 8, wherein the at least one first volume is defined by the cup and a cover sealed over the opening.
10. The device of claim 9, wherein the second container is an additional cover sealed over the opening of the cup.
- 10 11. The device of claim 1, wherein the second container is a box.
12. The device of claim 1, wherein the second container encloses the at least one first container.
- 15 13. The device of claim 1, wherein the at least one first container is a lower sealed portion of a cooking bag.
14. The device of claim 1, wherein the second container is a cooking bag.
- 20 15. The device of claim 1, having a plurality of first containers.
16. The device of claim 15, wherein the second container encloses all of the first containers.
- 25 17. The device of claim 1, wherein the at least one first container defines a plurality of separate volumes.
18. The device of claim 17, wherein the at least one first container is enclosed within the second container.
- 30 19. The device of claim 1, further including an insulating container.

20. A method for improving microwave cooking comprising:

providing a first container defining a first volume for holding food
including at least one venting mechanism for enabling steam to exit the
container;

- 5 providing a second container defining a second volume including at least
one venting mechanism for enabling steam to exit the container; and
arranging the first container and the second container to allow steam that
escapes the first volume to enter the second volume.
